 PROFESSIONAL SUMMARY

Software Engineering Manager with 10+ years in software engineering and 4+ years leading distributed engineering teams. Currently manage 10+ backend engineers across Prague and Dublin, while leading delivery for a 15-person cross-functional scrum team powering Workday's People Analytics platform. Focused on partnering closely with Product to turn product roadmaps into reliable high-scale backend services, mentoring engineers toward promotions, and using practical AI tools to cut engineering toil. Outside of work, I actively build and ship small utility apps.

 CORE COMPETENCIES & TECHNICAL SKILLS

- People & Leadership:

Direct line management (10+ backend engineers), hiring & onboarding, mentoring toward promotions, cross-functional team leadership (Prague, Dublin, India), performance reviews.
- Delivery & Management:

Agile/Scrum planning, technical debt prioritization, capacity planning, SLA/SLO tracking, cross-team dependency management.
- Platform Architecture:

Distributed backend architectures, microservices orchestration, event-driven pipelines, API design, high-availability service design, incident reviews & RCAs.
- AI & Developer Tooling:

Practical AI workflows, LLM coding assistants (Claude, Cursor), prompt techniques, automated triage workflows, developer productivity tooling.
- Tech Stack & Cloud:

Kotlin, Java 21, Spring Boot, MySQL, Liquibase, Kafka, ZooKeeper, Docker, Kubernetes, AWS, GCP, Apache Spark, ANTLR, CI/CD, Snyk/CVE remediation.

 PROFESSIONAL EXPERIENCE

Software Engineering Manager — People Analytics

 Workday

 Prague, Czech Republic ·  Jan 2023 – Present

- Lead backend platform engineering for Workday People Analytics, delivering automated workforce insights for hundreds of enterprise tenants handling up to 11M+ worker records each. Promoted from Senior Software Engineer to Engineering Manager after leading core platform epics, architecture modernization, and developer tooling.

• Team Leadership:

Manage 10+ backend engineers across Prague and Dublin, and act as delivery lead for a 15-person cross-functional scrum team (Backend, UI, SDET, Data across Prague, Dublin, and India). Hired and onboarded new team members, wrote onboarding guides, and coached several engineers through successful promotions.

• Delivery Leadership:

Partner with Product, Data Team, UI, Security, and Legal to ship core platform features, from real-time workforce metric calculations and automated reporting to privacy-safe peer benchmarking.

• AI Knowledge Sharing:

Run regular engineering roundtables to share practical AI developments, demo tools, and encourage experimentation. Host sessions on coding assistants, prompt techniques, and automation ideas that help teams streamline daily engineering tasks.

• Security & Vulnerability Triage:

Set up continuous vulnerability remediation using AI-assisted workflows to triage incoming Snyk and CVE alerts, evaluate breaking-change risks, and automate dependency patch PRs.

• Platform Reliability & Operations:

Keep weekly automated data refresh pipelines running smoothly across hundreds of enterprise tenants (handling up to 11M+ worker records per tenant). Built an on-call rotation with a 24-hour triage SLA, lead weekly operational reviews, and conduct blameless post-mortems (RCAs) to prevent repeat issues.

• Zero-Downtime Releases:

Improved platform resilience with rolling zero-downtime upgrades, graceful service restarts, and automated retry mechanisms, keeping weekly release cycles uninterrupted.

• Office Culture:

Help keep the Prague engineering community active and connected by organizing the office football group, hosting internal tech demos, and participating in site leadership activities.

Senior Software Engineer — People Analytics

 Workday

 Prague, Czech Republic ·  2021 – Jan 2023

- Worked as backend tech lead on core data orchestration services, driving key architectural projects that led to my promotion into engineering management.

• Analytics Query Language (AQL):

Co-created AQL using ANTLR, a declarative, SQL-like query language that moved data pipeline definitions into version-controlled, testable code in Git (with client libraries in TypeScript, Java, and Python). AQL still powers all People Analytics data pipelines today.

• AQL Workbench:

Built an in-product web IDE from scratch, giving analysts and engineers a browser-based editor with syntax highlighting, auto-completion, query validation, and interactive test execution.

• Mentorship & Best Practices:

Mentored junior and mid-level engineers in Kotlin, Spring Boot, and distributed systems, establishing team habits around thorough testing, clean code reviews, and documentation.

Built microservices for enterprise CRM and document management.

- Built backend microservices and asynchronous processing pipelines for enterprise CRM and document management using Java, Spring Boot, Apache Kafka, and MongoDB.
- Implemented event-driven document processing workflows and integrated frontend components using Angular and Docker.
- Collaborated in an agile scrum team to deliver reliable customer relationship features on time.

Supply Chain Loss Elimination internal tool.

- Built an internal web application to track and reduce operational waste across P&G manufacturing plants, replacing paper-based tracking with a centralized system (PHP, Yii Framework, PostgreSQL, Bootstrap).

INDEPENDENT PROJECTS & APPLICATIONS

WinMiceNative macOS · Swift

An open-source macOS menu bar app that brings Windows-style stepped mouse scrolling and side-button navigation to Mac.
[GitHub](#) [Product Page](#)

Translate Pro for BraveBrowser Extension · TypeScript

A browser extension published on the Chrome Web Store that brings faster, one-click in-page translation to the Brave browser.

EDUCATION

Federal University of Lavras (UFLA)

Bachelor of Science in Information Systems · Brazil (2012 – 2017)

Coursework: Distributed Systems, Algorithms & Data Structures, Compilers, Database Systems.
